

ABSTRACT OF THE DISCLOSURE

5 An underdeck pontoon lift system for supporting pontoons of various sizes in a
6 stable manner. The underdeck pontoon lift system includes a base structure, a plurality
7 of front lifting jacks and a rear lifting jack pivotally attached to the base structure, a
8 support bed pivotally attached to the lifting jacks, a front structure extending from the
9 base structure, and an elevating unit for manipulating the lifting jacks. The lifting
10 jacks preferably have an inverted U-shaped base member with a pair of support
11 members extending upwardly, where the width of the support members is less than the
12 width of the base member. The lifting jacks are preferably attached to cross members
13 that extend between side members of the base structure. The support bed preferably
14 has a rear tapered portion for assisting in the loading of a pontoon.
